Casein Free

Probiotics That Taste Like Yummy Chocolate?

It's Kirkman's New, Children's Chewable Pro-Bio Gold™ Chocolate Wafers

Kirkman's most popular probiotic is now offered in a tasty, chocolate chewable version. It tastes like creamy white chocolate! Your kids will love them and so will you!!!

Our new Children's Chewable Pro-Bio Gold™ Chocolate Wafers (0458-090) offers the same six certified strains of organisms present in our signature Pro-Bio Gold™ product with 20 billion CFUs (colony forming units) per wafer. These strains of bacteria combined offer

broad-spectrum gastrointestinal (GI) support for digestion of a wide range of foods.

Good bacteria, essential for a healthy GI tract can be destroyed or depleted by a number of factors including:

- environmental toxins/chemicals;
- excessive stressful conditions;
- a diet lacking the essential nutrients;
- food allergies/sensitivities overgrowth of yeasts, bacteria, etc.;
- abnormal permeability of the intestine;
- exposure to numerous medications;
- Pro-Bio™ Chewable Wafers utilize six probiotic strains that have undergone DNA fingerprinting

to support their identity and have also demonstrated long-term stability.

More than 65 scientific studies and published articles have been written in support of the strains, documenting the ability of these strains to:

- possess a high tolerance to survive stomach acids and bile salts;
- support the body's natural defenses and the intestinal tract's immunological barrier;
- help alleviate occasional diarrhea and constipation;
- support lactose digestion;
- adhere to and colonize the GI mucosal membrane;
- assist with regulating intestinal mobility and normal bowel function;
- possibly help create an inhibitory effect on free radical activity in the colon.
